

Technical Implementation and Architecture (40 points)

Google Technology Integration (15)

Meaningful and integral use of at least one Google Developer technology
Demonstrates understanding of why the technology was chosen and how it enhances the solution

AI Implementation Quality (10)

AI is essential to the solution (not decorative)
Appropriate AI model choice with justification
Consideration of ethical AI aspects (bias, hallucination mitigation, privacy, transparency)

Working Demonstration & UI/UX (10)

Functional prototype demonstrating core features
Stable execution with no critical or fatal bugs
Clear and intuitive user experience

AI Model Performance (5)

Accuracy, efficiency, and effectiveness of AI components
Evidence of efforts to reduce hallucinations or incorrect outputs

Business Innovation and Problem Solving (40 points)

Originality and Creativity (10)

- Novel or creative approach to addressing the problem
- Innovative use of AI and/or Google technologies
- Clear differentiation from existing solutions or approaches

Problem–Solution Fit & Real-World Relevance (15)

- Well-defined real-world problem
- Clear identification of stakeholders and target beneficiaries
- Solution directly addresses the problem in a practical and realistic way

Scalability (10)

- Consideration of scalability, cost, and resource usage
- Assessment of the proposed business model's viability and potential for sustainable, profitable growth.

Deployment Readiness (5)

- Feasible deployment approach (cloud, APIs, infrastructure)
 - Clear potential to evolve into a real-world product or startup
-

Presentation and Pitching (20 points)

Clarity and Structure (10)

- Clear storytelling: problem → solution → AI → impact
- Logical flow, strong narrative, and effective time management

Visual Appeal and Engagement (10)

- Clear, well-designed slides and diagrams
- Effective demo that enhances understanding and engagement
